EDUCATION

New York University , New York, NY <i>M.S. in Cybersecurity</i> Honors/Awards: Cyber Fellowship	Jan 2026–Dec 2027 GPA: 4.00
Northeastern University , Boston, MA <i>B.S. in Computer Science and Neuroscience</i> Honors/Awards: Dean's Presidential Merit Scholarship, Dean's List	Sep 2021–May 2025 Cum Laude

SKILLS & INTERESTS

Languages: Python, Java, C, C++, R, SQL (MySQL, NoSQL), HTML, CSS, JavaScript, TypeScript, Bash
Programming & Tools: Wireshark, Splunk, Kibana, Malware Analysis, Digital Forensics, Reverse Engineering, REST APIs, Docker, Flask
Certifications: Google Cybersecurity, CompTIA Security+ (In Progress), NCAE-CO (In Progress)
Hobbies/Interests: Baking, Matcha/Espresso, Fashion/Cosmetics, Interior Design, Strategy/Competitive/Puzzle Games, Mystery/Horror, Keyboard Building/Modding, Miffy

EXPERIENCE

Research Assistant , Queens University (Remote) • Assist Bayesian sequential research on mitigating algorithm aversion using hybrid intelligence systems . • Develop random forest model with controlled performance metrics. • Create and maintain interactive experiment platform , accommodating 1,000+ participants . • Analyze data in R and utilize Bayesian t-tests to measure advice taking behavior and detect effects ($d=0.5$).	Jan 2024–March 2026
EXP Makerspace Lab Assistant , Northeastern University • Oversaw 5,000 ft² makerspace and provided technical and project support to 500+ weekly users . • Conducted security and equipment training programs for diverse audiences.	Feb 2023–May 2025
SGA Software Engineer , Northeastern University • Built a high traffic website with real-time check-ins, reducing server response times by 40% . • Optimized PostgreSQL queries, RESTful APIs, and integrated secure access protocols.	Jan 2024–May 2024

PROJECTS

Differentially Private Medical Data Synthesis <i>Python, Scikit-Learn, Differential Privacy, Machine Learning</i> • Built a data-centric two-stage pipeline to protect Electronic Health Records (EHR) against adversarial vulnerabilities (e.g., re-identification). • Attained a 97.73% task-agnostic predictive accuracy retention rate on unmodified Random Forest architecture. • Successfully reduced the empirical Membership Inference Attack (MIA) advantage from 16.60% to 1.80% .	
Text Classification System <i>Python, Keras, PyTorch, TensorFlow, NLTK, Hugging Face</i> • Developed a two-stage NLP system using machine learning models to classify text messages as spam (96.2% accuracy) or topics (93.8% accuracy). • Achieved 93.5% end-to-end pipeline accuracy by integrating a neural network (spam) + BERT (topics) .	
Predictive Factors of Drug Use <i>Python, Jupyter, Pandas, NumPy</i> • Explored relationships between drug use frequency, personality traits (Five-Factor Model), impulsivity (BIS-11), sensation seeking (ImpSS), and demographics. • Trained 3 Python ML models on a dataset of 1,885 individuals (UCI), using Jupyter Lab for preprocessing, exploratory analysis, and visualization.	
AnswerHub <i>React, HTML/CSS, TypeScript, CI/CD, Agile/Scrum, MVC</i> • Front-end lead for developing accessibility-first Stack Overflow alternative with key accessibility features such as customizable display options (high-contrast modes, adjustable font sizes) and text-to-speech.
